

RX-795

Featuring

IntelliDOT™

IntelliDOT understands how our brains perceive light. Though ambient lighting may change drastically, IntelliDOT maintains ideal reticle brightness seamlessly.

How it Works: An ambient light sensor, specifically tuned for the human eye, continually measures light at your target. Data collected by this sensor is used to make imperceptible adjustments to the reticle's intensity so that it appears to remain the same intensity, even in changing light. For example, if you're in a dimly lit room then transition outside into full sun, it will seem as if your reticle never changes intensity, yet remains perfectly bright. That's the magic of IntelliDOT!

Model Number:	RX-795r3	RX-795r6	RX-795g3	RX-795g6
Reticle Size/Type:	3 MOA dot	6 MOA dot	3 MOA dot	6 MOA dot
Reticle Color:	Red	Red	Green	Green
Power Supply:	One (1) CR1632 3-volt lithium coin battery			
Dimensions:	49 mm (L) x 27 mm (W) x 29 mm (H)			
Weight:	38 g (1.34 oz)			
Waterproof Rating:	IPX7 (submersed 1 meter for 30 minutes)			
Housing Material:	6061 aluminum alloy			
Adjustments:	Windage and elevation; 1 MOA per click

Picatinny rail mounting plate included.

TAKING **REFLEX SIGHTS** TO THE **NEXT LEVEL**

Supreme Reliability

SecureTaps & Settings Menu

Buttonless tap controls (SecureTaps) are used to access the Settings menu. Simple gestures such as Tap, Hold & Release and Tilt-n-Tap are used to select or modify options.

Military-Style Hybrid Flex PCB

Flexible circuit boards increase vibration resistance, improve durability, reduce size and weight, and help eliminate the need for extra mechanical connectors.

Ruggedized Housing

Built for solid performance in demanding environments.

Unparalleled Brightness & Contrast

High-Efficiency LED

Uses less power than a standard LED to provide an even brighter reticle.

IntelliDOT

The "intelligent dot" of the RX-795 always remains bright against your target even in changing light. (See other side.)

ClearVision Lens

Engineered for shooters by shooters to extremely high standards to reduce parallax, distortion, and light artifacts.

Personalized Intensity

Specify your personal "Intensity Offset" for IntelliDOT to use each time it calculates your reticle's intensity, so it's always just as bright as you like it.

True Tactical Readiness

Instant On / Enhanced Off

Knows when it's being used and when it's not. Just pick it up to turn it on or set it down to turn it off. It even knows when it's holstered, so it'll power down to extend battery life.

Auto & On-Demand Battery Level Check & Diagnostics

Automatic tests are conducted on the LED, light sensor, motion sensor, and battery after every use. Manual tests can be performed with just a few taps. Results of on-demand tests are indicated by a combination of audible tones (if enabled) and LED flashes.

10-Year Standby Battery Life

Engineered for years of performance on a single CR1632 lithium coin battery.

IntelliDOT

Surrounding light is continually measured by IntelliDOT to adjust reticle intensity accordingly. As you move from one lighting environment to the next, the RX-795 is ready to go without the need for manual readjustments. (See other side.)

How will this fit my gun?
